

#03 INFECTION

- Bad smell and coloring in secretions with the patient at home.

CONSULT

#04 BLEEDING

- 5 to 7 days after procedure
Normal: when coughing or at performing respiratory therapy.
- Bleeding through cannula or stoma
After 7 days of procedure head over to the ER.

#02 CHOKES / ASPHYXIA

The patient is full of secretions.

- SWEATING
- NASAL FLARING

Perform suction therapy.

#01 BRONCO-ASPIRATION

Food step towards the lungs.

- VOMIT
- FOOD WASTES IN MOUTH

Stop nutrition and perform respiratory therapy through trachea.

Make sure to locate your patient in the right position.

CONSULT

#05 DECANNULATION

Tracheostomy cannula output.

- Occlude the hole with gauze and provide oxygen to the patient by a mask in mouth and nose.

If it's a chronic patient, provide oxygen directly to the tracheostomy.

HEAD OVER TO THE ER!
